[No. 285.

1st Quarter.

CÚNTAS RÁITHEAMHAIL NA bPÓSADH, NA mBREITH, AGUS  
NA mBÁS I SAORSTÁT ÉIREANN.

---

QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

DURING THE QUARTER ENDED 31st MARCH, 1935,

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Notifications of certain Infectious Diseases in Urban and Rural areas, Persons Vaccinated, &c., &c., &c.*

---

*By Authority of the Registrar-General.*

To be purchased directly from the  
GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN, C2,  
or through any Bookseller.

---

*Price Sixpence Net.*

*NOTE.*—The figures given in this Report, being based on unrevised Registrars' Returns and compiled as soon as possible after the close of the Quarter, must be regarded as provisional. Revised figures will appear in the Detailed Annual Report.

The Deaths registered in any part of the country are referred to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the Districts in which they occur.

The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas. In Table IV, as a consequence, there is liability to slight understatement in the births for urban districts, and a corresponding overstatement in those given for the rural districts.

### GENERAL SUMMARY.

The **Marriage-rate** for the first quarter of 1935 was 5.0 per 1,000 of the estimated population. This rate is 0.3 above the average for the corresponding quarter of the five years, 1930-34. The rate for Catholic marriages was 5.2 and for all other marriages 2.6 per 1,000.

In Northern Ireland the marriage-rate for the quarter was 4.9 per 1,000; and in Scotland 6.3. In England and Wales the rate for the fourth quarter of 1934 was 8.7 per 1,000.

The **Birth-rate** was 19.0 per 1,000, representing 14,417 births registered. This rate is equal to the average for the first quarter of the five years, 1930-34. For Dublin City the birth-rate was 28.0; for Dún Laoghaire, 19.5; for Cork, 23.2; for Limerick, 27.6; and for Waterford, 26.9.

The corresponding birth-rate for Northern Ireland during the quarter was 19.0; for England and Wales, 14.7; and for Scotland, 18.0. The birth-rate for Belfast was 20.4; for Londonderry, 26.9; for London, 13.4; for Glasgow, 20.4; and for Edinburgh, 14.7.

The rate in respect of **Deaths** registered (in number 11,381) was 15.0, being 2.2 below the average (17.2) for the first quarter of the preceding five years.

For Dublin City the death-rate was 18.0; for Dún Laoghaire, 13.8; for Cork, 14.6; for Limerick, 18.7; and for Waterford, 17.9.

In Northern Ireland the death-rate for the quarter under review was 17.1 per 1,000; in England and Wales, 13.3; and in Scotland, 15.7. In Belfast the rate was 19.2; in Londonderry, 15.4; in London, 12.9; in Glasgow, 16.9; and in Edinburgh, 16.3.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) afforded an annual rate of 0.5 per 1,000, which is 0.1 below the average for the first quarter of the five years, 1930-34.

The mortality from **Influenza** was equivalent to a rate of 0.4 per 1,000, which is 0.5 below the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1.3 per 1,000, being 0.1 below the average rate for the first quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 4.9 per 1,000 births registered, comprising 1.2 for puerperal sepsis and 3.7 for other puerperal conditions, as compared with 4.8, 1.9 and 2.9 for the first quarter of 1934.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 78, in comparison with an average of 81 for the first quarter of the five years, 1930-34.

The **Population** in the middle of 1935 is estimated as 3,033,000 persons (comprising 1,545,000 males and 1,488,000 females) showing an increase of 20,000 on the estimate to the middle of 1934. This increase is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the first quarter of 1935 was 3,036, as compared with an average of 1,311 for the first quarter of the five years, 1930-34.

During the first quarter of 1935, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 200, and the number of **Immigrants** from these places was 268.

## MARRIAGES.

The marriages registered during the quarter ended 31st March, 1935, numbered 3,805, equivalent to an annual rate of 5.0 per 1,000 of the estimated population, this rate being 0.7 above that for the corresponding quarter of 1934, and 0.3 above the average for the first quarter of the five years, 1930-34 (See Table I). Of the total marriages, 3,659 (or 5.2 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (146) is equivalent to 2.6 per 1,000 of the population other than Catholic. The rate for Catholic marriages is 0.7 above and that for other marriages is 0.1 above the respective rates for the first quarter of the preceding year.

## BIRTHS.

Births registered in the 642 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 14,417, of which 7,403 were those of males and 7,014 of females, or 1,055 of the former to 1,000 of the latter.

The birth-rate was 19.0 per 1,000 of the estimated population, being equal to the average for the first quarter of the five years, 1930-34 (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 25.3, and for **Rural Districts**, 16.3, as compared with 24.7 and 17.0, respectively, in the first quarter of 1934 (See Table IV).

For the **Twelve Principal Towns**, the birth-rate was 26.4, as against 25.6 in the corresponding quarter of 1934.

Amongst these towns, the rates varied from 34.6 for Galway, 28.0 for Dublin, and 27.6 for Limerick Co. Borough, to 14.9 for Dundalk, 18.3 for Kilkenny and 19.5 for Dún Laoghaire.

## DEATHS.

The number of deaths registered during the quarter was 11,381, and of these 5,757 were deaths of males and 5,624 of females. For all persons the equivalent annual rate was 15.0 per 1,000 of the estimated population, being 2.2 below the average for the first quarter of the preceding quinquennial period, and 0.4 below the rate for the first quarter of the year 1934 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 17.0, as compared with 16.8 in the first quarter of 1934, and for **Rural Districts**, 14.2, in comparison with 14.9 for the corresponding period of the year 1934.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 17.3, as compared with 17.1 in the first quarter of 1934.

The rate for each of these towns is as follows, ranging in order from that with the lowest rate to that with the highest—Sligo 13.3, Dún Laoghaire 13.8, Galway 14.6, Cork 14.6, Dundalk 16.9, Kilkenny 17.5, Tralee 17.9, Waterford 17.9, Dublin 18.0, Limerick 18.7, Drogheda 19.2, and Wexford 19.2.

## Causes of Death.

Table II shows the mortality from some of the principal causes for the first quarter of 1935 and for each quarter of the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (417) from this group of causes is 16 above that for the first quarter of 1934, but is 15 below the average for the first quarter of the five years 1930-34. When compared with the average figure, increases are shown in measles and diphtheria, the increase in measles being 33 and diphtheria 8. Decreases have occurred in typhoid fever, scarlet fever and whooping-cough amounting to 5, 3, and 38 respectively.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 109; of these 73 (or 12.8 per 1,000 births) were recorded for urban areas, as against 36 (or 4.1 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 12.9 per 1,000 births, as compared with 12.5 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality-rate from the principal epidemic diseases in the Counties and Cities varied from 0.1 for each of Longford and Mayo, and 0.2 for each of Cavan, Limerick and Monaghan, to 1.1 for each of Dublin County Borough, Cork County Borough and Tipperary County S.R., 1.2 for Limerick County Borough, and 2.4 for Waterford County Borough.

The death-rate from these diseases for the twelve principal towns in the aggregate was 1.1, the rates varying between 0.3 for Galway and Sligo, 0.4 for Dún Laoghaire to 1.3 for Wexford, 1.6 for Drogheda and 2.4 for Waterford; the 119 deaths from all causes for the latter area included 7 from measles, one from scarlet fever, one from diphtheria, and 7 from diarrhoea and enteritis of children under 2 years (Table IV).

**Influenza.**—Deaths from influenza numbered 326, representing an annual rate of 0·4 per 1,000. The average number for the first quarter of the preceding five years was 658, with a rate of 0·9. Of the deaths for the quarter under review, 78 appertained to urban districts, and 248 to rural districts; the corresponding numbers for the first quarter of 1934 were 41 and 245.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 959, equivalent to an annual rate of 1·26 per 1,000 of the population, as compared with an average of 1,016, and a rate of 1·37 for the first quarter of the five years, 1930-34. As may be seen from Table III, the rates varied from 2·2 for each of Waterford county and Limerick county borough to 0·7 for each of the counties of Leitrim, Roscommon and Donegal. The rate for the aggregate city or borough areas and urban districts was 1·8 per 1,000 of the population of these areas, as compared with 1·0 for rural areas. For the twelve principal town areas it was 1·9 and for the urban districts under 10,000 population the rate was 1·7.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth was 71, being equal to 4·9 per 1,000 births registered. Of the 71 deaths, 17 were due to puerperal sepsis, or 1·2 per 1,000 births, and 54, or 3·7 per 1,000 births, to other puerperal conditions. The corresponding rates for the first quarter of 1934 were 4·8, 1·9 and 2·9 respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 1,125, or 9·9 per cent., were those of infants under one year of age, and 5,331, or 46·8 per cent., were those of persons 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 78 per 1,000 births registered, as compared with 58, 56 and 57 respectively, for the three preceding quarters, and an average of 81 for the first quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate the rate was 100 and for all rural districts 64 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in institutions numbered 3,381, or 29·7 per cent. of all deaths registered.

#### **Inquests.**

There were 298 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 2·6 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 2,091, or 18·4 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 2,225.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 31st March last was 4,449, or 30·9 per cent. of the births registered during the quarter, the corresponding rate for the first quarter of the five years 1930-34 being 37·8.

**CITY OF DUBLIN.**

**BIRTHS.**

Exclusive of 418 births in institutions of infants whose mothers were admitted from other localities, the number of births recorded for the City of Dublin during the quarter under review was 3,004. The annual rate represented thereby was 28·0 per 1,000 of the estimated population, as compared with a rate of 27·0 for the corresponding quarter of 1934. The total births registered (3,422) comprise 1,792 boys and 1,630 girls.

**DEATHS.**

Omitting 241 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Éireann, the deaths for Dublin during the quarter numbered 1,933, equivalent to an annual rate of 18·0 per 1,000 of the population, as compared with 16·5 for the first quarter of 1934. The total number of deaths registered in the city was 2,125—1,054 males and 1,071 females.

**Causes of Death.**

The following statement shows the number of deaths from some of the principal causes for the first quarter of 1935, as compared with 1934 :—

| CITY OF DUBLIN              |  |                     |                     |
|-----------------------------|--|---------------------|---------------------|
| CAUSE OF DEATH              |  | First Quarter, 1935 | First Quarter, 1934 |
| Principal Epidemic Diseases | Typhoid fever .. ..                                | .                   | 2                   |
|                             | Typhus .. ..                                       | .                   | .                   |
|                             | Small-pox .. ..                                    | .                   | .                   |
|                             | Measles .. ..                                      | 58                  | .                   |
|                             | Scarlet fever .. ..                                | 1                   | 1                   |
|                             | Whooping-cough .. ..                               | 11                  | 35                  |
|                             | Diphtheria .. ..                                   | 26                  | 34                  |
|                             | Dysentery .. ..                                    | .                   | .                   |
|                             | Diarrhoea and enteritis (children under 2 years) } | 24                  | 22                  |
|                             | Influenza .. ..                                    | 47                  | 10                  |
|                             | Pulmonary tuberculosis ..                          | 163                 | 166                 |
|                             | Other forms .. ..                                  | 41                  | 34                  |

When compared with the figures for the first quarter of 1934, deaths from measles, diarrhoea and enteritis under 2 years, influenza and tuberculous disease show increases of 58, 2, 37 and 4, respectively ; on the other hand deaths from typhoid fever, whooping-cough and diphtheria show decreases of 2, 24 and 8 respectively.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 120, affording an annual rate of 1·1 per 1,000, being 0·2 above that for the first quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 204, representing an annual rate of 1·90 per 1,000, as compared with 1·89 for the first quarter of the preceding year.

Of the 204 deaths, 163 were ascribed to pulmonary and 41 to other forms of the disease, the former representing a rate of 1·52 per 1,000, and the latter 0·38 per 1,000.

**Ages at Death.**

Of the 1,933 deaths relating to the City of Dublin, registered during the quarter, 472 (or 24·4 per cent.) were those of children under five years of age, and 613 (or 31·7 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the first quarter of 1934 being 24·2 and 29·1.

**Infant Mortality.**

There were 311 deaths of infants under one year of age for the city, equivalent to a rate of 104 per 1,000 births, which is equal to that for the first quarter of 1934.

**Deaths in Public Institutions.**

The deaths of Dublin residents occurring in public institutions, registered during the quarter, numbered 947 or 49·0 per cent. of the total deaths.

**Cases of Infectious Disease.**

The number of cases of infectious disease notified during the quarter, as shown in Table VI, was 571. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

### METEOROLOGY.

The mean temperature for the thirteen weeks ended 30th March, 1935, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 43.3°; at Cork (Roche's Point) it was 45.4°; at Peamount Sanatorium 42.3°; at Greenwich 43.1°; at Glasgow 41.9°, and at Edinburgh 41.3°.

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 2.7; at Cork (Ballinacurra), 2.5; at Peamount Sanatorium, 2.6; at Greenwich, 1.7; at Glasgow, 1.9; and at Edinburgh, 2.7.

The rainfall during the same period measured at Dublin 5.59 inches; at Cork (Roche's Point), 5.55 inches; at Peamount Sanatorium, 8.26 inches; at Greenwich, 3.95 inches; at Glasgow, 7.72 inches; and at Edinburgh, 4.29 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London :—

#### January.

The weather of January was chiefly distinguished by a marked deficiency of rainfall. It was also generally dull and rather mild in most places.

The first three days were exceptionally mild and temperature was also rather high around the 14th and 24th. A cold spell occurred from the 7th to 9th and another rather cold period from the 26th to 29th. The extremes for the month were 56°F at Mallarany on the 1st and 23°F at Birr Castle on the 8th.

Rainfall was unusually deficient, particularly in the south: less than 20 per cent. of the normal was registered locally near the south coast. At Valentia Observatory, it was the driest January since records were started in 1866.

Sunshine aggregates were everywhere deficient, the percentage of the average amounting to only 49 at Malin Head and 52 at Mallarany.

#### February.

Mild, unsettled weather, with frequent strong winds and local gales, prevailed during February. Rainfall was excessive in most districts, but a deficiency was recorded at some stations, mainly in the extreme south. The heaviest daily fall occurred, as a rule, on one of the days 24th to 27th (e.g. 41 mm. at Glasnevin, 40 mm. at Rathfarnham and 38 mm at Hazelhatch on the 24th).

Mean monthly temperature exceeded the average at all stations. Mild spells were experienced from 1st to 3rd and 13th to 20th and cold periods from the 7th to 9th and 22nd to 26th. The extreme temperatures for the month were 59°F at Hazelhatch on the 16th and 21°F at Glasnevin, Dublin, on the 26th.

Sunshine totals exceeded the average at most stations, the excess being 23 per cent. of the average at Birr Castle and 22 per cent. at Markree Castle.

#### March.

The weather of March was mild and dry. Mean temperature for the month everywhere exceeded the average, the excess being greatest at Trinity College, Dublin (3.2°F). An unusually warm spell occurred from the 18th to 28th and 60°F was reached or slightly exceeded locally at times during this period. A cold spell, accompanied by easterly winds, was experienced from the 9th to 11th: day temperatures failed to reach 40°F at a number of stations on the 9th and 10th. On the other hand, the coldest nights occurred mainly from the 12th to 15th.

Rainfall was deficient in all districts, the deficiency being greatest in County Dublin: at Dublin City, the fall amounted to only 26 per cent. of the normal.

Sunshine aggregates were, on the whole, rather below the average, but they were variable, the percentage of the average varying from 77 at Malin Head to 113 at Seskin, Carrick-on-Suir.

TABLE A.—Showing the Mean Weekly Values and the Differences from their Average Values of the METEOROLOGICAL ELEMENTS at Phoenix Park, Dublin, for the Thirteen Weeks ended March 30th, 1935.

| WEEK ENDED        | AIR PRESSURE.                    |                          | TEMPERATURE. |            |                 |                                     |          |         | HYGROMETER.       |                   | BRIGHT SUNSHINE. |                    | RAINFALL.*                          |                         |               | WIND.  |                                     |                 |

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1935; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

## URBAN DISTRICTS.

TABLE IV.—BIRTHS AND DEATHS registered during the Quarter ended 31st March, 1935, relating to Urban Districts (including County Boroughs), and the number of Deaths from some of the principal causes (see Note on second page) ; also particulars of BIRTHS and DEATHS for BELFAST and LONDONDERRY.

QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

DURING THE QUARTER ENDED 30th JUNE, 1935,

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts ; Notifications of certain Infectious Diseases in Urban and Rural areas, Persons Vaccinated, &c., &c., &c.*

---

*By Authority of the Registrar-General.*

To be purchased directly from the  
GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN, C2,  
or through any Bookseller.

---

*Price Sixpence Net.*

*NOTE.*—The figures given in this Report, being based on unrevised Registrars' Returns and compiled as soon as possible after the close of the Quarter, must be regarded as provisional. Revised figures will appear in the Detailed Annual Report.

The Deaths registered in any part of the country are referred to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the Districts in which they occur.

The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas. In Table IV, as a consequence, there is liability to slight understatement in the births for urban districts, and a corresponding overstatement in those given for the rural districts.

---

### GENERAL SUMMARY.

The **Marriage-rate** for the second quarter of 1935 was 4.0 per 1,000 of the estimated population. This rate is 0.4 below the average for the corresponding quarter of the five years, 1930-34. The rate for Catholic marriages was 4.1 and for all other marriages 3.8 per 1,000. In Northern Ireland the marriage-rate for the quarter was 7.1 per 1,000; and in Scotland 7.4. In England and Wales the rate for the first quarter of 1935 was 5.2 per 1,000.

The **Birth-rate** was 19.7 per 1,000, representing 14,913 births registered. This rate is 0.5 below the average for the second quarter of the five years, 1930-34. For Dublin City the birth-rate was 27.6; for Dún Laoghaire, 21.7; for Cork, 23.7; for Limerick, 25.2; and for Waterford, 27.5.

The corresponding birth-rate for Northern Ireland during the quarter was 20.2; for England and Wales, 15.5; and for Scotland, 18.8. The birth-rate for Belfast was 22.4; for Londonderry, 28.0; for London, 13.7; for Glasgow, 21.0; and for Edinburgh, 16.4.

The rate in respect of **Deaths** registered (in number 10,933) was 14.4, being 0.1 above the average (14.3) for the second quarter of the preceding five years.

For Dublin City the death-rate was 15.2; for Dún Laoghaire, 14.8; for Cork, 16.7; for Limerick, 16.3; and for Waterford, 22.5.

In Northern Ireland the death-rate for the quarter under review was 14.8 per 1,000; in England and Wales, 12.1; and in Scotland, 13.1. In Belfast the rate was 14.5; in Londonderry, 17.4; in London, 11.0; in Glasgow, 13.3; and in Edinburgh, 12.7.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) afforded an annual rate of 0.5 per 1,000, which is equal to the average for the second quarter of the five years, 1930-34.

The mortality from **Influenza** was equivalent to a rate of 0.4 per 1,000, which is equal to the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1.4 per 1,000, which was also the average rate for the second quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 4.2 per 1,000 births registered, comprising 1.5 for puerperal sepsis and 2.7 for other puerperal conditions, as compared with 5.3, 2.3 and 3.0 for the second quarter of 1934.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 67, in comparison with an average of 66 for the second quarter of the five years, 1930-34.

---

The **Population** in the middle of 1935 is estimated as 3,033,000 persons (comprising 1,545,000 males and 1,488,000 females) showing an increase of 20,000 on the estimate to the middle of 1934. This increase is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the second quarter of 1935 was 3,980, as compared with an average of 4,443 for the corresponding quarter of the five years, 1930-34.

During the second quarter of 1935, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 188, and the number of **Immigrants** from these places was 718.

## MARRIAGES.

The marriages registered during the quarter ended 30th June, 1935, numbered 3,063, equivalent to an annual rate of 4.0 per 1,000 of the estimated population, this rate being 0.7 below that for the corresponding quarter of 1934, and 0.4 below the average for the second quarter of the five years, 1930-34 (See Table I). Of the total marriages, 2,851 (or 4.1 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (212) is equivalent to 3.8 per 1,000 of the population other than Catholic. The rate for Catholic marriages is 0.7 below but that for other marriages is 0.4 above the respective rates for the second quarter of the preceding year.

## BIRTHS.

Births registered in the 642 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 14,913, of which 7,655 were those of males and 7,258 of females, or 1,055 of the former to 1,000 of the latter.

The birth-rate was 19.7 per 1,000 of the estimated population, being 0.5 below the average for the second quarter of the five years, 1930-34 (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 25.4, and for **Rural Districts**, 17.2, as compared with 25.3 and 17.6, respectively, in the second quarter of 1934 (See Table IV).

For the **Twelve Principal Towns**, the birth-rate was 26.3, as against 26.4 in the corresponding quarter of 1934.

Amongst these towns, the rates varied from 38.5 for Galway, 27.6 for Dublin, and 27.5 for Waterford, to 17.1 for Tralee, 19.5 for Kilkenny and 21.2 for Wexford.

## DEATHS.

The number of deaths registered during the quarter was 10,933, and of these 5,659 were deaths of males and 5,274 of females. For all persons the equivalent annual rate was 14.4 per 1,000 of the estimated population, being 0.1 above the average for the second quarter of the preceding quinquennial period, and 1.1 above the rate for the second quarter of the year 1934 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 15.6, as compared with 13.6 in the second quarter of 1934, and for **Rural Districts**, 13.9, in comparison with 13.2 for the corresponding period of the year 1934.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 15.6, as compared with 13.7 in the second quarter of 1934.

The rate for each of these towns is as follows, ranging in order from that with the lowest rate to that with the highest—Tralee 10.6, Dundalk 11.7, Sligo 12.2, Dún Laoghaire and Drogheda 14.8, Dublin 15.2, Limerick 16.3, Cork 16.7, Galway 17.4, Kilkenny 18.3, Wexford 18.5, and Waterford 22.5.

## Causes of Death.

Table II shows the mortality from some of the principal causes for the first two quarters of 1935 and for each quarter of the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (396) from this group of causes is 87 above that for the second quarter of 1934, and 56 above the average for the corresponding quarter of the five years 1930-34. When compared with the average figure, increases are shown in typhoid fever, measles, diphtheria and diarrhoea and enteritis of children under 2 years, amounting to 4, 61, 24 and 14 respectively. A slight decrease (2) has occurred in scarlet fever, whilst whooping-cough has declined by 45.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 111; of these 66 (or 11.5 per 1,000 births) were recorded for urban areas, as against 45 (or 4.9 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 12.0 per 1,000 births, as compared with 9.5 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality-rate from the principal epidemic diseases in the Counties and Cities varied from 0.1 for each of Longford, Offaly, Leitrim and Roscommon, to 1.0 for Cork County Borough, 1.1 for Tipperary S.R., 1.3 for Dublin County, and 3.1 for Limerick County Borough.

The death-rate from these diseases for the twelve principal towns in the aggregate was 0.8, the rates varying between 0.3 for Dún Laoghaire and Wexford, and 0.4 for Tralee to 1.0 for Cork, and 3.1 for Limerick; the 161 deaths from all causes for the latter area included one from typhoid fever, 25 from measles, one from diphtheria, and 4 from diarrhoea and enteritis of children under 2 years (Table IV). There were no deaths from any of the principal epidemic diseases registered in either Dundalk or Sligo.

**Influenza.**—Deaths from influenza numbered 341, representing an annual rate of 0·4 per 1,000. The average number for the second quarter of the preceding five years was 363, with a rate of 0·5. Of the deaths for the quarter under review, 76 appertained to urban districts, and 265 to rural districts; the corresponding numbers for the second quarter of 1934 were 33 and 181.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 1,085, equivalent to an annual rate of 1·4 per 1,000 of the population, as compared with an average of 1,044, and a rate of 1·4 for the second quarter of the five years, 1930-34. As may be seen from Table III, the rates varied from 2·5 for each of Cork county borough and Limerick county borough to 0·6 for Leitrim, and 0·7 for Meath county. The rate for the aggregate city or borough areas and urban districts was 2·0 per 1,000 of the population of these areas, as compared with 1·2 for rural areas. For the twelve principal town areas it was 2·0 and for the urban districts under 10,000 population the rate was 1·9.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth was 63, being equal to 4·2 per 1,000 births registered. Of the 63 deaths, 22 were due to puerperal sepsis, or 1·5 per 1,000 births, and 41, or 2·7 per 1,000 births, to other puerperal conditions. The corresponding rates for the second quarter of 1934 were 5·3, 2·3 and 3·0 respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 993, or 9·1 per cent., were those of infants under one year of age, and 4,844, or 44·3 per cent., were those of persons aged 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 67 per 1,000 births registered, as compared with 56, 57 and 78 respectively, for the three preceding quarters, and an average of 66 for the second quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate the rate was 83 and for all rural districts 57 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in institutions numbered 3,432, or 31·4 per cent. of all deaths registered.

#### **Inquests.**

There were 300 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 2·7 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 1,818, or 16·6 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 1,703.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 30th June last was 11,425, or 76·6 per cent. of the births registered during the quarter, the corresponding rate for the second quarter of the five years 1930-34 being 87·9.

**CITY OF DUBLIN.**

**BIRTHS.**

Exclusive of 457 births in institutions of infants whose mothers were admitted from other localities, the number of births recorded for the City of Dublin during the quarter under review was 2,955. The annual rate represented thereby was 27·6 per 1,000 of the estimated population, as compared with a rate of 27·5 for the corresponding quarter of 1934. The total births registered (3,412) comprise 1,742 boys and 1,670 girls.

**DEATHS.**

Omitting 266 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Éireann, the deaths for Dublin during the quarter numbered 1,628, equivalent to an annual rate of 15·2 per 1,000 of the population, as compared with 13·5 for the second quarter of 1934. The total number of deaths registered in the city was 1,831—948 males and 883 females.

**Causes of Death.**

The following statement shows the number of deaths from some of the principal causes for the second quarter of 1935, as compared with 1934 :—

| CITY OF DUBLIN                 |   |                            |                            |
|--------------------------------|---|----------------------------|----------------------------|
| CAUSE OF DEATH                 |   | Second<br>Quarter,<br>1935 | Second<br>Quarter,<br>1934 |
| Principal Epidemic<br>Diseases | Typhoid fever .. ..                                 | 1                          | 2                          |
|                                | Typhus .. ..  | .                          | .                          |
|                                | Small-pox .. ..                                     | .                          | .                          |
|                                | Measles .. ..                                       | 21                         | 1                          |
|                                | Scarlet fever .. ..                                 | 2                          | 1                          |
|                                | Whooping-cough .. ..                                | 3                          | 29                         |
|                                | Diphtheria .. ..                                    | 18                         | 19                         |
|                                | Dysentery .. ..                                     | .                          | .                          |
|                                | Diarrhoea and enteritis<br>(children under 2 years) | 25                         | 11                         |
|                                | Influenza .. ..                                     | 26                         | 11                         |
|                                | Pulmonary tuberculosis .. ..                        | 164                        | 166                        |
|                                | Other forms .. ..                                   | 55                         | 47                         |

When compared with the figures for the second quarter of 1934, deaths from measles, diarrhoea and enteritis under 2 years, influenza and tuberculous disease show increases of 20, 14, 15 and 6, respectively; on the other hand deaths from whooping-cough show a decrease of 26.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 70, affording an annual rate of 0·7 per 1,000, being 0·1 above that for the second quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 219, representing an annual rate of 2·04 per 1,000, as compared with 2·01 for the second quarter of the preceding year.

Of the 219 deaths, 164 were ascribed to pulmonary and 55 to other forms of the disease, the former representing a rate of 1·53 per 1,000, and the latter 0·51 per 1,000.

**Ages at Death.**

Of the 1,628 deaths relating to the City of Dublin, registered during the quarter, 349 (or 21·4 per cent.) were those of children under five years of age, and 464 (or 28·5 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the second quarter of 1934 being 17·8 and 29·3.

**Infant Mortality.**

There were 237 deaths of infants under one year of age for the city, equivalent to a rate of 80 per 1,000 births. The rate for the second quarter of 1934 was 66.

**Deaths in Public Institutions.**

The deaths of Dublin residents occurring in public institutions, registered during the quarter, numbered 879 or 55·1 per cent. of the total deaths.

**Cases of Infectious Disease.**

The number of cases of infectious disease notified during the quarter, as shown in Table VI, was 432. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

**METEOROLOGY.**

The mean temperature for the thirteen weeks ended 29th June, 1935, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 50.3°; at Cork (Roche's Point) it was 51.5°; at Peamount Sanatorium 49.8°; at Greenwich 54.2°; at Glasgow 50.8°, and at Edinburgh 48.1°.

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 5.9; at Cork (Ballinacurra), 5.8; at Peamount Sanatorium, 5.8; at Greenwich, 5.1; at Glasgow, 4.8; and at Edinburgh, 5.1.

The rainfall during the same period measured at Dublin 6.9 inches; at Cork (Roche's Point), 9.4 inches; at Peamount Sanatorium, 6.7 inches; at Greenwich, 7.3 inches; at Glasgow, 8.1 inches; and at Edinburgh, 6.0 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

**April.**

This was rather a wet and warm month, except around Dublin, but there was nearly the average amount of sunshine. Fair weather predominated after the 23rd. Winds from N. or N.W. prevailed during the first five days, then mainly southerly to westerly winds until the 20th, after which date the most frequent directions were between N. and E. There were gales on the 10th and 11th. Temperature was only in a few instances so much as 1½° above the average. There were occasional slight frosts in the first fortnight; the highest temperatures came mostly on the 27th, 28th or 29th, when readings between 64° and 67° were registered. The greater part of the month's rain fell between the 6th and the 22nd, 34 mm. being measured at Foynes on the 13th. There was a slight excess of sunshine above the average in the North, and practically the average amount in the South.

**May.**

May was a dry and sunny month, with one very cold spell. North-easterly winds predominated, and were strongest from the 15th to the 18th. Temperature reached 70° at times between the 5th and the 12th and again towards the end of the month, the highest figure reported being 73° at Mallaranny and Foynes on the 28th. The lowest temperatures occurred between the 15th and 18th, the minimum of 28° being recorded at Newtownforbes and Birr Castle on the 15th, and near Dublin on the 18th.

Rainfall was lowest in the South, where it ranged from about 20 to 40 per cent. A considerable portion of the month's total fell on the 18th and 19th, over 20 mm. being recorded locally on both days. The excess of sunshine was greatest in the north-west and least in the south-east. At Markree Castle the average daily duration was over 8½ hours, being 3 hours per day above the average.

**June.**

June was an exceptionally wet month. Winds from between S. and W. were the most common, but easterly winds were not infrequent. Gales occurred on the 7th when a deep depression was moving northeastwards across Northern Ireland and Scotland. Temperature was on the whole low up to the 19th. It became higher on the 20th and was mostly above the average from then until the end of the month, reaching 77° on the 25th at Waterford.

Rainfall was in many instances 200 per cent. or more of the average and even reached 300 per cent. locally. At Valentia, the total of 207 mm. was the largest for June since records began there in 1866. In Co. Dublin and a few neighbouring counties, the excess was not nearly so great as it was further to the west and south. The number of days on which rain fell was unusually large. There was not much less than the average amount of sunshine.

TABLE A.—Showing the Mean Weekly Values and the Differences from their Average Values of the METEOROLOGICAL ELEMENTS at Phoenix Park, Dublin, for the Thirteen Weeks ended June 29th, 1935.

| WEEK ENDED      | AIR PRESSURE.                    |                          | TEMPERATURE. |            |                 |                                     |          | HYGROMETER. |                   | BRIGHT SUNSHINE.  |                | RAINFALL.*         |                                     |                         | WIND. |               |                                     |                 |

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1935; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

**CASES OF INFECTIOUS DISEASES.**

**Table VI.—Summary of Cases of Infectious Disease notified to the Department of Local Government and Public Health in respect of Saorstát Éireann for the Quarter ended 30th June, 1935.**

The letters in the last column denote the following diseases: A. Acute anterior poliomyelitis. B. Cerebro-spinal meningitis. C. Continued fever. D. Encephalitis lethargica. E. Erysipelas. F. Ill-defined fever. G. Membranous croup. H. Meningitis. J. Ophthalmia neonatorum. K. Dysentery. L. Malaria.

CÚNTAS RÁITHEAMHAIL NA bPÓSADH, NA mBREITH, AGUS  
NA mBÁS I SAORSTÁT ÉIREANN.

**The Royal Sanitary Institute**  
**Library.**  
**QUARTERLY RETURN**

OF THE

**MARRIAGES, BIRTHS AND DEATHS**

REGISTERED IN

**SAORSTÁT ÉIREANN**

**DURING THE QUARTER ENDED 30th SEPTEMBER, 1935,**

**BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,**

**WITH**

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts; Notifications of certain Infectious Diseases in Urban and Rural areas, Persons Vaccinated, &c., &c., &c.*

---

*By Authority of the Registrar-General.*

To be purchased directly from the  
GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN, C2,  
or through any Bookseller.

---

*Price Sixpence Net.*

*NOTE.—The figures given in this Report, being based on unrevised Registrars' Returns, are compiled as soon as possible after the close of the Quarter and must be regarded as provisional. Revised figures will appear in the Detailed Annual Report.*

*Deaths registered in institutions are transferred for statistical purposes to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the Districts in which they occur.*

*The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas.*

---

### GENERAL SUMMARY.

The **Marriage-rate** for the third quarter of 1935 was 5·4 per 1,000 of the estimated population. This rate is 0·6 above the average for the corresponding quarter of the five years, 1930-34. The rate for Catholic marriages was 5·4 and for all other marriages 5·2 per 1,000.

In Northern Ireland the marriage-rate for the quarter was 8·1 per 1,000; and in Scotland 9·0. In England and Wales the rate for the second quarter of 1935 was 9·7 per 1,000.

The **Birth-rate** was 19·7 per 1,000, representing 14,941 births registered. This rate is 0·1 below the average for the third quarter of the five years, 1930-34. For Dublin City the birth-rate was 27·3; for Dún Laoghaire, 21·2; for Cork, 26·6; for Limerick, 29·5; and for Waterford, 31·1.

The corresponding birth-rate for Northern Ireland during the quarter was 19·5; for England and Wales, 15·3; and for Scotland, 17·3. The birth-rate for Belfast was 22·0; for Londonderry, 25·8; for London, 13·5; for Glasgow, 18·6; and for Edinburgh, 15·2.

The rate in respect of **Deaths** registered (in number 8,791) was 11·6, being 0·3 above the average (11·3) for the third quarter of the preceding five years.

For Dublin City the death-rate was 12·5; for Dún Laoghaire, 12·1; for Cork, 12·3; for Limerick, 13·7; and for Waterford, 12·0.

In Northern Ireland the death-rate for the quarter under review was 11·9 per 1,000; in England and Wales, 9·7; and in Scotland, 10·8. In Belfast the rate was 12·2; in Londonderry, 14·7; in London, 9·0; in Glasgow, 10·4; and in Edinburgh, 10·9.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) represented an annual rate of 0·6 per 1,000, which is 0·1 above the average for the third quarter of the five years, 1930-34.

The mortality from **Influenza** was equivalent to a rate of 0·2 per 1,000, being 0·1 above the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1·1 per 1,000, which was also the average rate for the third quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 3·0 per 1,000 births registered, comprising 0·7 for puerperal sepsis and 2·3 for other puerperal conditions, as compared with 3·5, 1·2 and 2·3 for the third quarter of 1934.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 62, in comparison with an average of 55 for the third quarter of the five years, 1930-34.

---

The **Population** in the middle of 1935 is estimated as 3,033,000 persons (comprising 1,545,000 males and 1,488,000 females) showing an increase of 20,000 on the estimate to the middle of 1934. This increase is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the third quarter of 1935 was 6,150, as compared with an average of 6,306 for the corresponding quarter of the five years, 1930-34.

During the third quarter of 1935, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 318, and the number of **Immigrants** from these places was 690.

## MARRIAGES.

The marriages registered during the quarter ended 30th September, 1935, numbered 4,084, equivalent to an annual rate of 5.4 per 1,000 of the estimated population; this rate was 0.2 above that for the corresponding quarter of 1934, and 0.6 above the average for the third quarter of the five years, 1930-34 (See Table I). Of the total marriages, 3,791 (or 5.4 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (293) is equivalent to 5.2 per 1,000 of the population other than Catholic. The rate for Catholic marriages is 0.1 above and that for other marriages is 1.0 above the respective rates for the third quarter of the preceding year.

## BIRTHS.

Births registered in the 641 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 14,941, of which 7,737 were those of males and 7,204 of females, or 1,074 of the former to 1,000 of the latter.

The birth-rate was 19.7 per 1,000 of the estimated population, being 0.1 below the average for the third quarter of the five years, 1930-34, but 0.2 above that for the corresponding quarter of last year (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 26.2, and for **Rural Districts**, 17.0 (See Table IV), as compared with 24.8 and 17.3, respectively, in the third quarter of 1934.

For the **Twelve Principal Towns**, the birth-rate was 27.1, as against 25.9 in the corresponding quarter of 1934.

Amongst these towns, the rates varied from 36.0 for Galway, 33.0 for Kilkenny and 32.4 for Drogheda to 16.5 for Wexford, 21.4 for Dundalk and 21.2 for Dún Laoghaire.

## DEATHS.

The number of deaths registered during the quarter was 8,791; of these 4,624 were deaths of males and 4,167 of females. For all persons the equivalent annual rate was 11.6 per 1,000 of the estimated population, being 0.3 above the average for the third quarter of the preceding quinquennial period, and 0.7 above the rate for the third quarter of the year 1934 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 12.3, as compared with 11.6 in the third quarter of 1934, and for **Rural Districts**, 11.3, in comparison with 10.7 for the corresponding period of the year 1934.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 12.5, as compared with 11.9 in the third quarter of 1934.

The rate for each of these towns is as follows, ranging in order from the lowest to the highest—Sligo 10.5; Drogheda 11.3; Waterford 12.0; Dún Laoghaire and Galway each 12.1; Cork and Kilkenny each 12.3; Dublin 12.5; Dundalk 13.4; Wexford 13.5; and Limerick and Tralee each 13.7.

## Causes of Death.

Table II shows the mortality from some of the principal causes for the first three quarters of 1935 and for each quarter of the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (420) from this group of causes is 103 above that for the third quarter of 1934, and 58 above the average for the corresponding quarter of the five years 1930-34. When compared with the average figure, increases are shown in measles, scarlet fever and diarrhoea and enteritis of children under 2 years, amounting to 19, 2, and 97, respectively; on the other hand decreases have occurred in typhoid fever, whooping-cough and diphtheria amounting to 7, 37, and 14, respectively.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 267; of these 198 (or 33.6 per 1,000 births) were recorded for urban areas, as against 69 (or 7.6 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 39.3 per 1,000 births, as compared with 10.9 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality-rate from the principal epidemic diseases in the Counties and Cities varied from 0.0 for Roscommon and 0.1 for Leitrim, Mayo and Sligo, to 2.4 for Waterford County Borough and 2.6 for Limerick County Borough. There were no deaths registered for Monaghan from any of these diseases.

The death-rate from these diseases for the twelve principal towns in the aggregate was 1.3, the rates varying between 0.3 for each of Dún Laoghaire and Sligo, and 0.4 for Tralee, to 2.4 for each of Waterford and Kilkenny, and 2.6 for Limerick; the 135 deaths from all causes for the latter area included 2 from measles, one from diphtheria, and 23 from diarrhoea and enteritis of children under 2 years (Table IV). There were no deaths from any of the principal epidemic diseases registered for Drogheda.

**Influenza.**—Deaths from influenza numbered 119, representing an annual rate of 0.2 per 1,000. The average number for the third quarter of the preceding five years was 90 with a rate of 0.1. Of the deaths for the quarter under review, 9 appertained to urban districts, and 110 to rural districts; the corresponding numbers for the third quarter of 1934 were 7 and 60.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 839, equivalent to an annual rate of 1.1 per 1,000 of the population, as compared with an average of 825, and a rate of 1.1 for the third quarter of the five years, 1930-34. As may be seen from Table III, the rates varied from 1.8 for Laoighis County and 1.5 for each of Dublin City and the counties of Carlow and Sligo, to 0.4 for Longford, and 0.5 for each of Tipperary N.R. and Leitrim. The rate for the aggregate city or borough areas and urban districts was 1.4 per 1,000 of the population of these areas, as compared with 1.4 for rural areas. For the twelve principal town areas it was 1.4 and for the urban districts under 10,000 population the rate was also 1.4.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth was 45, being equal to 3.0 per 1,000 births registered. Of the 45 deaths, 11 were due to puerperal sepsis, or 0.7 per 1,000 births, and 34, or 2.3 per 1,000 births, to other puerperal conditions. The corresponding rates for the third quarter of 1934 were 3.5, 1.2 and 2.3, respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 933, or 10.6 per cent., were those of infants under one year of age, and 3,800, or 43.2 per cent., were those of persons aged 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 62 per 1,000 births registered, as compared with 57, 78 and 67 respectively, for the three preceding quarters, and an average of 55 for the third quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate the rate was 83 and for all rural districts 49 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in institutions numbered 2,929, or 33.3 per cent. of all deaths registered.

#### **Inquests.**

There were 296 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 3.4 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 1,420, or 16.2 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 1,589.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 30th September last was 11,248 or 75.3 per cent. of the births registered during the quarter, the corresponding rate for the third quarter of the five years 1930-34 being 83.1.

**CITY OF DUBLIN.**

**BIRTHS.**

Exclusive of 484 births in institutions of infants whose mothers were admitted from other localities, the number of births recorded for the City of Dublin during the quarter under review was 2,923. The annual rate represented thereby was 27·3 per 1,000 of the estimated population, as compared with a rate of 26·1 for the corresponding quarter of 1934. The total births registered (3,407) comprise 1,783 boys and 1,624 girls.

**DEATHS.**

Omitting 223 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Éireann, the deaths for Dublin during the quarter numbered 1,336, equivalent to an annual rate of 12·5 per 1,000 of the population, as compared with 11·3 for the third quarter of 1934. The total number of deaths registered in the city was 1,521—780 males and 741 females.

**Causes of Death.**

The following statement shows the number of deaths from some of the principal causes for the third quarter of 1935, as compared with 1934:—

| CITY OF DUBLIN              |   |                     |                     |
|-----------------------------|---|---------------------|---------------------|
| CAUSE OF DEATH              |   | Third Quarter, 1935 | Third Quarter, 1934 |
| Principal Epidemic Diseases | Typhoid fever .. ..                                 | 1                   | 3                   |
|                             | Typhus .. ..  | ..                  | ..                  |
|                             | Small-pox .. ..                                     | ..                  | ..                  |
|                             | Measles .. ..                                       | 1                   | 3                   |
|                             | Scarlet fever .. ..                                 | 4                   | 2                   |
|                             | Whooping-cough .. ..                                | 3                   | 24                  |
|                             | Diphtheria .. ..                                    | 12                  | 11                  |
|                             | Dysentery .. ..                                     | ..                  | ..                  |
|                             | Diarrhoea and enteritis (children under 2 years) .. | 110                 | 61                  |
|                             | Influenza .. ..                                     | 1                   | 3                   |
|                             | Pulmonary tuberculosis .. ..                        | 133                 | 116                 |
|                             | Other forms .. ..                                   | 31                  | 38                  |

When compared with the figures for the third quarter of 1934, deaths from whooping-cough show a decrease of 21; deaths from diarrhoea and enteritis under 2 years an increase of 46, and from tuberculous disease an increase of 10.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 131, affording an annual rate of 1·2 per 1,000, being 0·2 above that for the third quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 164, representing an annual rate of 1·53 per 1,000, as compared with 1·45 for the third quarter of the preceding year.

Of the 164 deaths, 133 were ascribed to pulmonary and 31 to other forms of the disease, the former representing a rate of 1·24 per 1,000, and the latter 0·29 per 1,000.

**Ages at Death.**

Of the 1,336 deaths relating to the City of Dublin, registered during the quarter, 346 (or 25·9 per cent.) were those of children under five years of age, and 374 (or 27·9 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the third quarter of 1934 being 22·8 and 29·0.

**Infant Mortality.**

There were 288 deaths of infants under one year of age for the city, equivalent to a rate of 99 per 1,000 births. The rate for the third quarter of 1934 was 76.

**Deaths in Public Institutions.**

The deaths of Dublin residents occurring in public institutions, registered during the quarter, numbered 760 or 57·0 per cent. of the total deaths.

**Cases of Infectious Disease.**

The number of cases of infectious disease notified during the quarter, as shown in Table VI, was 430. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

**METEOROLOGY.**

The mean temperature for the thirteen weeks ended 28th September, 1935, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 59.1°; at Cork (Roche's Point) it was 59.7°; at Peamount Sanatorium 58.7°; at Greenwich 64.0°; at Glasgow 58.0°, and at Edinburgh 58.0°.

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 5.5; at Cork (Ballinacurra), 5.7; at Peamount Sanatorium, 5.9; at Greenwich, 6.7; at Glasgow, 4.6; and at Edinburgh, 5.5.

The rainfall during the same period at Dublin measured 6.6 inches; at Cork (Roche's Point), 9.6 inches; at Peamount Sanatorium, 6.5 inches; at Greenwich, 4.9 inches; at Glasgow, 8.0 inches; and at Edinburgh, 6.3 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London:—

**July.**

July was a warm, sunny and very dry month. Mean temperature everywhere exceeded the average, in some instances by more than 2° F. The highest temperatures occurred mostly on the 7th, 8th, 12th, 13th, 22nd and 23rd, when maxima of from 75° F. to 80° F. were recorded locally.

Rainfall was very deficient, the percentage of the average for the whole of Ireland being only 36, while less than 20 per cent. was received in parts of County Cork.

A universal excess of sunshine was enjoyed, the month's total being as much as 56 hours above the average at Seskin, Carrick-on-Suir, and 43 hours at Phoenix Park, Dublin.

**August.**

This was a warm month and dry on the whole. Mean temperature exceeded the average by 2° F. or more at many stations, and by 3.5° F. at Trinity College, Dublin. Warm spells occurred from the 5th to 11th and around the 20th and temperature reached or exceeded 75° F. at numerous places on the 6th, 7th, 10th or 20th, the extreme being 79° F. at Foynes on the 7th. In contrast the last five days were mainly cool.

At a few scattered stations rainfall exceeded the average but, for the most part, there was an appreciable deficiency. The heaviest daily falls occurred on the 10th, 11th, 18th and 26th (30 mm. at Mallarany on the 10th, 33 mm. at Cork on the 11th and 27 mm. at Rathfarnham on the 26th).

The duration of sunshine was below the average in the north and variable in the south. An excess of 33 hours occurred at Seskin, Carrick-on-Suir and at Ballinacurra, and a deficiency of 33 hours at Markree Castle.

**September.**

September was a very unsettled and unusually wet month. The general precipitation of the Irish Free State was more than twice the average, and at some stations it was the wettest September on record. The rainfall was not only excessive but very frequent, the number of days with measurable rain being greatly above the average. Heavy falls occurred on the 1st and 16th; for example, 55 mm. were measured at Kinsale on the 1st and 50 mm. at Newtownforbes on the 16th.

A period of strong westerly winds and local gales at times occurred between the 15th and 20th. Among the highest speeds recorded in gusts were 72 m.p.h. at Dunfanaghy on the 19th and 67 m.p.h. at Valentia Observatory on the 16th.

The month was somewhat milder than usual. The extremes were 70° F. at Trinity College, Dublin, on the 12th, 13th and 14th, and at Foynes and Cork on the 9th, and 34° F. at Markree Castle on the 25th.

Sunshine was deficient, particularly in the south.

TABLE A.—Showing the Mean Weekly Values and the Differences from their Average Values of the METEOROLOGICAL ELEMENTS at Phoenix Park, Dublin, for the Thirteen Weeks ended September 28th, 1935.

| WEEK ENDED       | AIR PRESSURE.                    |                          | TEMPERATURE. |            |                 |                                     |          |         | HYGROMETER.       |                   | BRIGHT SUNSHINE.— |                    | RAINFALL.*                         |                         | WIND. |               |                                     |                 |

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1935; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

## URBAN DISTRICTS.

TABLE IV.—BIRTHS AND DEATHS registered during the quarter ended 30th September, 1935, relating to Urban Districts (including County Boroughs), and the number of Deaths from some of the principal causes (see Note on second page) ; also particulars of Births and Deaths for BELFAST and LONDONDERRY.

**TABLE V.—Showing for the Quarter (13 weeks) ended 28th September, 1895, the mortality from All Causes and from some of the Principal Causes of residents of the several REGISTRARS' DISTRICTS in the CITIES OF DUBLIN and CORK, also the Deaths at certain age periods, and the number of Uncertified Deaths.**  
**Note:** This Table is a summary of the Weekly Returns and is not comparable with the figures shown in Table IV.—Correction is made for Deaths of DUBLIN and CORK City residents occurring in institutions situated within their boundaries, as well as in institutions situated in adjacent rural areas and in other towns of 10,000 inhabitants or upwards. See Note on second page.

QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS AND DEATHS

REGISTERED IN

SAORSTÁT ÉIREANN

DURING THE QUARTER ENDED 31st DECEMBER, 1935,

BY PROVINCES, COUNTIES, AND SUPERINTENDENT REGISTRARS' DISTRICTS,

WITH

*Certain Detailed information relative to the Deaths in Superintendent Registrars' Districts and in Urban Districts; Notifications of certain Infectious Diseases in Urban and Rural areas  
Persons Vaccinated, &c., &c., &c.*

ALSO

YEARLY SUMMARY, 1935.

---

*By Authority of the Registrar-General.*

To be purchased directly from the  
GOVERNMENT PUBLICATIONS SALE OFFICE, 5 NASSAU STREET, DUBLIN, C2,  
or through any Bookseller.

---

*Price Sixpence Net.*

*NOTE.—The figures given in this Report, being based on unrevised Registrars' Returns, are compiled as soon as possible after the close of the Quarter and must be regarded as provisional. Revised figures will appear in the Detailed Annual Report.*

*Deaths registered in institutions are transferred for statistical purposes to the normal area of residence of deceased. Deaths, if any, of residents of other countries remain in the districts in which they occur.*

*The Births registered in each urban area, according to numerical returns furnished by the Registrars, have been partially corrected by the exclusion of those occurring in institutions of infants whose mothers were admitted from other localities. No correction is made in these reports for births in rural areas.*

### GENERAL SUMMARY.

The **Marriage-rate** for the fourth quarter of 1935 was 4·3 per 1,000 of the estimated population. This rate is equal to the average for the corresponding quarter of the five years, 1930-34. The rate for Catholic marriages was 4·4 and for all other marriages 2·6 per 1,000.

In Northern Ireland the marriage-rate for the quarter was 7·2 per 1,000; and in Scotland 7·9. In England and Wales the rate for the third quarter of 1935 was 10·8 per 1,000.

The **Birth-rate** was 18·4 per 1,000, representing 13,948 births registered. This rate is 0·3 above the average for the fourth quarter of the five years, 1930-34. For Dublin City the birth-rate was 24·0; for Dún Laoghaire, 21·9; for Cork, 21·7; for Limerick, 27·4; and for Waterford, 29·1.

The corresponding birth-rate for Northern Ireland during the quarter was 18·2; for England and Wales, 13·8; and for Scotland, 16·9. The birth-rate for Belfast was 20·4; for Londonderry, 24·7; for London, 12·2; for Glasgow, 19·1; and for Edinburgh, 14·6.

The rate in respect of **Deaths** registered (in number 10,384) was 13·7, being 0·8 above the average (12·9) for the fourth quarter of the preceding five years.

For Dublin City the death-rate was 15·0; for Dún Laoghaire, 15·6; for Cork, 15·5; for Limerick, 16·6; and for Waterford, 14·6.

In Northern Ireland the death-rate for the quarter under review was 14·0 per 1,000; in England and Wales, 12·0; and in Scotland, 13·2. In Belfast the rate was 14·3; in Londonderry, 16·3; in London, 11·4; in Glasgow, 15·0; and in Edinburgh, 13·3.

Deaths from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) represented an annual rate of 0·5 per 1,000, which is equal to the average for the fourth quarter of the five years, 1930-34.

The mortality from **Influenza** was equivalent to a rate of 0·2 per 1,000, being also equal to the average for the corresponding quarter of the preceding five years.

The rate for deaths from all forms of **Tuberculous Disease** was 1·1 per 1,000, which is 0·1 above the average rate for the fourth quarter of the five years preceding.

Deaths from **Puerperal Conditions** are represented by a rate of 4·2 per 1,000 births registered, comprising 1·6 for puerperal sepsis and 2·6 for other puerperal conditions, as compared with 4·7, 1·5 and 3·2 for the fourth quarter of the five years 1930-34.

The **Infant Mortality** rate (deaths of infants under one year of age per 1,000 births registered) was 63, in comparison with an average of 67 for the fourth quarter of the preceding five years.

The **Population** in the middle of 1935 is estimated as 3,033,000 persons (comprising 1,545,000 males and 1,488,000 females) showing an increase of 20,000 when compared with the estimate at the middle of 1934. This estimate is derived from the natural increase (excess of births over deaths), and the excess of immigration over emigration.

The **Natural Increase** during the fourth quarter of 1935 was 3,564, as compared with an average of 3,877 for the corresponding quarter of the five years, 1930-34.

During the fourth quarter of 1935, the number of **Emigrants** to places out of Europe and not within the Mediterranean Sea was 432, and the number of **Immigrants** from these places was 468.

## MARRIAGES.

The marriages registered during the quarter ended 31st December, 1935, numbered 3,245, equivalent to an annual rate of 4·3 per 1,000 of the estimated population; this rate was 0·3 below that for the corresponding quarter of 1934, but is equal to the average for the fourth quarter of the five years, 1930-34 (See Table I). Of the total marriages, 3,101 (or 4·4 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (144) is equivalent to 2·6 per 1,000 of the population other than Catholic. The rate for Catholic marriages is 0·2 below and that for other marriages is 1·0 below the respective rates for the fourth quarter of the preceding year.

## BIRTHS.

Births registered in the 641 Registrars' Districts into which Saorstát Éireann is divided for registration purposes, amounted to 13,948, of which 7,111 were those of males and 6,837 of females, or 1,040 of the former to 1,000 of the latter.

The birth-rate was 18·4 per 1,000 of the estimated population, being 0·3 above the average for the fourth quarter of the five years, 1930-34, and also 0·3 above that for the corresponding quarter of last year (See Table I).

The birth-rate for **Urban Districts** (including the cities or boroughs) was 23·0, and for **Rural Districts**, 16·5 (See Table IV), as compared with 22·4 and 16·2, respectively, in the fourth quarter of 1934.

For the **Twelve Principal Towns**, the birth-rate was 24·1, as against 23·2 in the corresponding quarter of 1934.

Amongst these towns, the rates varied from 37·7 for Galway, 29·9 for Drogheda and 29·1 for Waterford to 15·2 for Tralee, 16·3 for Dundalk and 21·7 for Cork.

## DEATHS.

The number of deaths registered during the quarter was 10,384; of these 5,490 were deaths of males and 4,894 of females. For all persons the equivalent annual rate was 13·7 per 1,000 of the estimated population, being 0·8 above the average for the fourth quarter of the preceding quinquennial period, and 1·5 above the rate for the fourth quarter of the year 1934 (See Table I).

For the **Urban Districts** in the aggregate, the death-rate was 14·8, as compared with 12·8 in the fourth quarter of 1934, and for **Rural Districts**, 13·2, in comparison with 12·0 for the corresponding period of the year 1934.

The annual rate represented by deaths from all causes for the **Twelve Principal Towns** in the aggregate was 15·3, as compared with 13·0 in the fourth quarter of 1934.

The rate for each of these towns is as follows, ranging in order from the lowest to the highest—Waterford 14·6; Galway 14·9; Dublin and Sligo each 15·0; Drogheda 15·4; Cork and Wexford each 15·5; Dún Laoghaire 15·6; Dundalk and Kilkenny each 16·3; Limerick 16·6; Tralee 18·6.

## Causes of Death.

Table II shows the mortality from some of the principal causes by quarters for the year 1935 and for the preceding five years, as well as the averages for each quarter of these years.

**Principal Epidemic Diseases.**—From this Table it will be seen that the number of deaths (366) from this group of causes is 100 above that for the fourth quarter of 1934, but is 13 less than the average for the corresponding quarter of the five years 1930-34. When compared with the average figure, decreases are shown in typhoid fever, measles, whooping-cough and diphtheria, amounting to 5, 5, 25 and 13, respectively; on the other hand increases have occurred in scarlet fever and diarrhoea and enteritis of children under 2 years, amounting to 21 and 15, respectively.

Deaths from diarrhoea and enteritis of children under 2 years, numbered 155; of these 92 (or 17·8 per 1,000 births) were recorded for urban areas, as against 63 (or 7·2 per 1,000 births) for rural areas. For urban areas of 10,000 population and upwards ("Twelve Principal Towns"), the mortality was 19·4 per 1,000 births, as compared with 11·0 per 1,000 for urban districts with less than 10,000 inhabitants.

Table III shows that the mortality rate from the principal epidemic diseases in the Counties and Cities varied from 0·1 for Carlow, Longford and Meath, and 0·2 for Waterford, Sligo and Monaghan, to 1·1 for Waterford County Borough and 1·5 for Limerick County Borough. There were no deaths registered for Leitrim from any of these diseases.

The death-rate from these diseases for the twelve principal towns in the aggregate was 0·9, the rates varying between 0·2 for Dún Laoghaire, and 0·5 for Cork, to 1·5 for Limerick, and 1·6 for Drogheda; the 49 deaths from all causes for the latter area included 5 from diphtheria (Table IV).

**Influenza.**—Deaths from influenza numbered 142, representing an annual rate of 0·2 per 1,000. The average number for the fourth quarter of the preceding five years was 130 with a rate of 0·2. Of the deaths for the quarter under review, 24 appertained to urban districts, and 118 to rural districts; the corresponding numbers for the fourth quarter of 1934 were 16 and 84.

**Tuberculosis.**—The number of deaths from all forms of this disease during the quarter was 814, equivalent to an annual rate of 1·1 per 1,000 of the population, as compared with an average of 785, and a rate of 1·0 for the fourth quarter of the five years, 1930-34. As may be seen from Table III, the rates varied from 1·8 for Westmeath county, 1·7 for Dublin city and 1·5 for Cork county borough, to 0·3 for Roscommon county, 0·5 for each of the counties of Meath, Waterford and Monaghan, and 0·6 for Cavan county. The rate for the aggregate city or borough areas and urban districts was 1·6 per 1,000 of the population of these areas, as compared with 0·9 for rural areas. For the twelve principal town areas it was 1·6 and for the urban districts of under 10,000 population the rate was 1·5.

**Puerperal Conditions.**—The number of deaths ascribed to accidents and diseases of pregnancy and childbirth was 59, being equal to 4·2 per 1,000 births registered. Of the 59 deaths, 23 were due to puerperal sepsis, or 1·6 per 1,000 births, and 36, or 2·6 per 1,000 births, to other puerperal conditions. The corresponding average rates for the fourth quarter of the five years 1930-34 were 4·7, 1·5 and 3·2, respectively.

#### **Ages at Death.**

Of the total deaths at all ages registered during the quarter, 873, or 8·4 per cent., were those of infants under one year of age, and 4,921, or 47·4 per cent., were those of persons aged 65 years and upwards.

**Infant Mortality.**—The infant mortality rate was 63 per 1,000 births registered, as compared with 78, 67 and 62 respectively, for the three preceding quarters, and an average of 67 for the fourth quarter of the five years preceding (Table I).

For county boroughs and urban districts in the aggregate the rate was 84 and for all rural districts 50 per 1,000 births (Table III).

#### **Deaths in Public Institutions.**

Deaths in institutions numbered 3,192, or 30·7 per cent. of all deaths registered.

#### **Inquests.**

There were 353 inquests or deaths registered on Coroners' Certificates during the quarter, this number being 3·4 per cent. of the total deaths registered.

#### **Uncertified Deaths.**

The number of entries in which the cause of death was not stated to have been certified by a medical practitioner was 1,950, or 18·8 per cent. of the total deaths.

#### **Cases of Infectious Diseases Notified.**

Table VI gives the number of such cases notified during the quarter in urban and rural districts. The total number amounted to 2,370.

#### **Vaccination.**

As returned by the Registrars, the number of successful primary vaccinations during the quarter ended 31st December last was 6,475, or 46·4 per cent. of the births registered during the quarter, the corresponding rate for the fourth quarter of the five years 1930-34 being 59·4.

**CITY OF DUBLIN.**

**BIRTHS.**

Exclusive of 454 births in institutions of infants whose mothers were admitted from other localities, the number of births recorded for the City of Dublin during the quarter under review was 2,569. The annual rate represented thereby was 24·0 per 1,000 of the estimated population, as compared with a rate of 24·5 for the corresponding quarter of 1934. The total births registered (3,023) comprise 1,578 boys and 1,445 girls.

**DEATHS.**

Omitting 255 deaths registered in the city relating to other localities, and including those of persons usually resident in the city who died elsewhere in Saorstát Éireann, the deaths for Dublin during the quarter numbered 1,609, equivalent to an annual rate of 15·0 per 1,000 of the population, as compared with 12·9 for the fourth quarter of 1934. The total number of deaths registered in the city was 1,824—931 males and 893 females.

**Causes of Death.**

The following statement shows the number of deaths from some of the principal causes for the fourth quarter of 1935, as compared with 1934:—

| CITY OF DUBLIN              |  |                      |                      |
|-----------------------------|--|----------------------|----------------------|
| CAUSE OF DEATH              |  | Fourth Quarter, 1935 | Fourth Quarter, 1934 |
| Principal Epidemic Diseases | Typhoid fever ... ..                               | .                    | 4                    |
|                             | Typhus " ... ..                                    | .                    | .                    |
|                             | Small-pox ... ..                                   | .                    | .                    |
|                             | Measles ... ..                                     | 7                    | 7                    |
|                             | Scarlet fever ... ..                               | 11                   | .                    |
|                             | Whooping-cough ... ..                              | 1                    | 1                    |
|                             | Diphtheria ... ..                                  | 33                   | 11                   |
|                             | Dysentery ... ..                                   | .                    | .                    |
|                             | Diarrhoea and enteritis (children under 2 years) } | 46                   | 27                   |
|                             | Influenza .. ..                                    | 9                    | 8                    |
| Pulmonary tuberculosis ..   |  | 143                  | 122                  |
| Other forms .. ..           |  | 37                   | 25                   |

When compared with the figures for the fourth quarter of 1934, noticeable increases are apparent, 33 in the case of tuberculosis, 22 in diphtheria, 19 in diarrhoea and enteritis and 11 in scarlet fever; on the other hand, typhoid fever shows a decrease of 4; whilst the figures for measles and whooping-cough show no change from those for last year.

**Principal Epidemic Diseases.**—The deaths from this group of causes numbered 98, affording an annual rate of 0·9 per 1,000, being 0·4 above that for the fourth quarter of the preceding year.

**Tuberculosis.**—The deaths from all forms of tuberculous disease recorded for the city numbered 180, representing an annual rate of 1·68 per 1,000, as compared with 1·39 for the fourth quarter of the preceding year.

Of the 180 deaths, 143 were ascribed to pulmonary and 37 to other forms of the disease, the former representing a rate of 1·33 per 1,000, and the latter 0·35 per 1,000.

**Ages at Death.**

Of the 1,609 deaths relating to the City of Dublin registered during the quarter, 335 (or 20·8 per cent.) were those of children under five years of age, and 520 (or 32·3 per cent.) were of persons 65 years of age or upwards, the corresponding percentages in respect of the fourth quarter of 1934 being 16·5 and 33·9.

**Infant Mortality.**

There were 231 deaths of infants under one year of age for the city, equivalent to a rate of 90 per 1,000 births. The rate for the fourth quarter of 1934 was 68.

**Deaths in Public Institutions.**

The deaths of Dublin residents occurring in public institutions, registered during the quarter numbered 805 or 50·0 per cent. of the total deaths.

**Cases of Infectious Disease.**

The number of cases of infectious disease notified during the quarter, as shown in Table VI, was 768. Table VII gives the number of cases under treatment in Dublin hospitals during the quarter.

**METEOROLOGY.**

The mean temperature for the thirteen weeks ended 28th December, 1935, deduced from the mean weekly temperature as returned from the Ordnance Survey Office, Phoenix Park, Dublin, was 43·8°; at Cork (Roche's Point) it was 47·0°; at Peamount Sanatorium 43·4°; at Greenwich 45·4°; at Glasgow 42·3°, and at Edinburgh 42·2°.

The mean daily number of hours of bright sunshine recorded for the period at Dublin was 3·1; at Cork (Ballinacurra), 2·5; at Peamount Sanatorium, 2·9; at Greenwich, 1·8; at Glasgow, 1·1; and at Edinburgh, 2·3.

The rainfall during the same period at Dublin measured 7·5 inches; at Cork (Roche's Point), 10·0 inches; at Peamount Sanatorium, 7·9 inches; at Greenwich, 8·3 inches; at Glasgow, 14·1 inches; and at Edinburgh, 11·2 inches.

The following information has been kindly furnished by the Director of the Meteorological Office, London :—

**October.**

The month was unsettled, with frequent strong winds and local gales at times. The gale of the 18th-19th was notable; a speed of 90 miles per hour was registered in a gust at Dunfanaghy, County Donegal, on the 19th.

Mean temperature was somewhat below the average generally. Two mild spells occurred from the 13th-18th and 26th-29th and a cold period from about the 19th-23rd. The extremes for the month were, 66°F. at Glasnevin and Trinity College (Dublin) on the 15th and at Cork on the 26th, and 29°F. at Glasnevin on the 21st.

For the country as a whole rainfall exceeded the average, but a deficiency occurred in the south and south-east, while a large excess was experienced in the extreme north and north-west. For instance, at individual stations the percentage of the average varied from 51 at Ballinacurra and 54 at University College, Cork, to 173 at Westport House, County Mayo, and 264 at Malin Head.

Sunshine aggregates were below the average in the north and rather variable in the south. At Seskin, Carrick-on-Suir, an excess of 25 hours was enjoyed, while a deficiency of nearly 38 hours was experienced at Malin Head.

**November.**

November was unsettled and rather cold and wet, with sunshine above the average on the whole.

Mean temperature was somewhat below the average generally. The first few days were mild, day temperature reaching or exceeding 55°F. at most places on the 3rd. A second mild spell occurred around the 28th. The lowest temperatures were registered either on the 17th or from the 23rd-25th. The extremes for the month were 59°F. at Trinity College, Dublin, on the 3rd and 24°F. at Markree Castle, Foynes, and Cork on the 25th and at Phoenix Park, Dublin, on the 17th.

The general precipitation amounted to about 130 per cent. of the average. Hail occurred more frequently than usual on the west coast; it was reported on nine days at Valentia and eight at Blacksod Point.

The duration of bright sunshine was, on the whole, decidedly above the average, though a slight deficit was registered at one or two stations. Phoenix Park, Dublin, and Seskin, Carrick-on-Suir, were particularly fortunate, with an excess above the average of 34 hours and 21 hours, respectively.

**December.**

The month was remarkable for an extremely cold spell from the 17th-24th. It was also dry and sunny.

Mean temperature was everywhere below the average, the deficiency being as great as 5·0°F. at Foynes, 4·9°F. at Birr Castle and 4·8°F. at Newtownforbes. The spell from the 17th-24th was exceptionally severe; among the lowest minimum temperatures reported were 12°F. at Markree Castle, 15°F. at Phoenix Park and Hazelhatch and 16°F. at Birr Castle and Newtownforbes on the 23rd, and 16°F. at Foynes on the 22nd. On the other hand, the last week of the year was mild.

The deficiency of rainfall was general and less than half the average fall was registered in some central areas. Hail was again very frequent at certain stations in the north and west.

A large excess of bright sunshine was enjoyed in most instances, though a deficiency was recorded at one or two stations in the south. The excess amounted to 74 per cent. of the average at Mallarany and 48 per cent. at Phoenix Park, Dublin.

TABLE A.—Showing the Mean Weekly Values and the Differences from their Average Values of the METEOROLOGICAL ELEMENTS at Phoenix Park, Dublin, for the Thirteen Weeks ended December 28th, 1935.

| WEEK ENDED | AIR PRESSURE.                    |                          | TEMPERATURE. |            |                 |                   |                   |                   | HYGROMETER.       |                   |                   | BRIGHT SUNSHINE.  |                   |                   | RAINFALL.*        |                   | WIND.             |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   |                   | \* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1935; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

[illegible]

\*The rates for Saorstát Éireann, the City of Dublin and the Borough of Dun Laoghaire are calculated on the estimated populations in the middle of 1935.  
† Including all deaths registered on Coroners' Certificates.

**TABLE V.—Showing for the Quarter (13 weeks) ended 28th December, 1935, the mortality from All Causes and from some of the Principal Causes of the several REGISTRARS' DISTRICTS in the CITIES OF DUBLIN AND CORK, also the Deaths at certain age periods, and the number of Uncertified Deaths.**  
 NOTE : This Table is a summary of the Weekly Returns and is not comparable with the figures shown in Table IV. Correction is made for Deaths of DUBLIN and CORK City residents occurring in institutions situated within their boundaries, as well as in institutions situated in adjacent rural areas and in other towns of 10,000 inhabitants or upwards. (See Note on second page.)

**YEARLY SUMMARY**  
**OF**  
**MARRIAGES, BIRTHS AND DEATHS.**  
**1935.**

---

*(Note—the figures are provisional—See Note on second page of Quarterly Return.)*

---

**GENERAL SUMMARY.**

The rate per 1,000 of the population represented by the **number of Marriages** (14,197) registered in Saorstát Éireann in 1935 was 4·7, being equal to that for 1934, and 0·1 above an average of 4·6 for the five years preceding.

The **Birth-rate** in Saorstát Éireann during the year, based on 58,219 births, was 19·2 per 1,000 of the estimated population; the rate for last year was also 19·2, the average rate for the five years 1930-34 being 19·3.

The birth-rate for the city of Dublin was 26·7 per 1,000; for the borough of Dún Laoghaire, 21·1; for the county borough of Cork, 23·8; for Limerick, 27·4; and for Waterford, 28·6.

For Northern Ireland the birth-rate was 19·2; for England and Wales, 14·7; and for Scotland, 17·8.

The rate for Belfast was 21·3; for Londonderry, 26·4; for London, 13·1; for Glasgow, 19·7; and for Edinburgh, 15·3.

The **rate** in respect of **Deaths** registered in Saorstát Éireann, numbering 41,489, was 13·7 per 1,000, as compared with 13·0 in 1934 and an average of 13·9 for the five years 1930-34.

The death-rate for the city of Dublin was 15·2 per 1,000; for the borough of Dún Laoghaire, 14·1; for Cork, 14·8; for Limerick, 16·3; and for Waterford, 16·7.

The corresponding death-rate for Northern Ireland was 14·4; for England and Wales, 11·7; and for Scotland, 13·2.

For Belfast the death-rate was 15·0; for Londonderry, 16·0; for London, 11·3; for Glasgow, 13·9; and for Edinburgh, 13·3.

The mortality rate represented by deaths in Saorstát Éireann from the **Principal Epidemic Diseases** (comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases) was 0·5 per 1,000, as compared with 0·4 in 1934 and an average of 0·5 for the previous five years.

The death-rate from **Influenza** was 0·3 per 1,000, which was 0·1 above that for 1934 but 0·1 below the average rate for the five years 1930-34.

Deaths from **Tuberculosis** (all forms) afforded a rate of 1·2 per 1,000, which was the same as that for the year 1934, and also the same as the average rate for the preceding five years.

The rate for **Pulmonary Tuberculosis** was 1·0, being 0·1 above that for 1934.

Deaths from **Puerperal Conditions** represent a rate of 4·1 per 1,000 births registered during the year (1·3 per 1,000 from puerperal sepsis and 2·8 per 1,000 from other puerperal conditions), as compared with 4·7 in 1934 and an average of 4·5 for the five years 1930-34.

The **Infant Mortality** rate (deaths under one year of age per 1,000 births registered) was 67, the rate for the year 1934 being 63, and the average for the previous five years, 67.

---

The **estimated Population** in the middle of 1935 (3,033,000) shows an increase of approximately 61,000 as compared with the result of the Census taken in April, 1926, viz., 2,971,992. This estimate is calculated by adding to the Census population the natural increase (excess of births over deaths) and the number of immigrants; and deducting from the result the number of emigrants since the date of the Census.

As compared with 1934, the estimated population in 1935 shows an increase of 20,000.

During the year 1935 the **Natural Increase** was 16,730, as compared with 18,814 in 1934, and an average of 15,937 for the five years 1930-34.

**Emigrants** numbered 1,138, as against 1,178 in 1934, and an average of 4,157 for the five years 1930-34, while the number of **Immigrants** was 2,144, as compared with 2,229 in 1934, the average for the five years 1930-34 being 3,572.

### MARRIAGES.

The number of marriages registered in Saorstát Éireann during 1935 was 14,197, representing 4.7 per 1,000 of the estimated population. In the first quarter 3,805 were registered; in the second, 3,063; in the third, 4,084; and in the fourth, 3,245; affording rates per 1,000 of the population of 5.0, 4.0, 5.4, and 4.3, respectively (see Table I, page 87). Of the 14,197 marriages, 13,402 were celebrated according to the rites and ceremonies of the Catholic Church, representing 4.8 per 1,000 of the Catholic population; and there were 795 other marriages, equivalent to 3.5 per 1,000 of the population other than Catholic. The former rate is 0.2 above and the latter 0.5 per 1,000 below the average of the five years 1930-34.

### BIRTHS.

The births registered in 1935 numbered 58,219, being 29,906 of males and 28,313 of females, or 1,056 of the former to 1,000 of the latter, and represent a rate of 19.2 per 1,000 of the population, as against an annual average of 57,388 births and a rate of 19.3 per 1,000 for the five years, 1930-34.

The births recorded for **urban areas** amounted to 22,511 and for **rural areas** 35,708, the former being equivalent to 25.0 per 1,000 and the latter to 16.7, in comparison with the corresponding rates of 24.3 and 17.0 in 1934.

For the **twelve Principal Towns** in the aggregate the birth-rate was 26.0 per 1,000, as compared with 25.3 per 1,000 in the preceding year. The rate for the remaining urban districts was 21.6, as against 21.0 in 1934.

### DEATHS.

The deaths registered in Saorstát Éireann during the year 1935 numbered 41,489, consisting of 21,530 deaths of males and 19,959 of females, and are equivalent to a rate of 13.7 per 1,000 of the estimated population, as against 13.0 in 1934 and an average rate of 13.9 for the five years 1930-34. (Table I, page 87.)

The death-rate per 1,000 for all **urban districts** (the population of which is about 30 per cent. of Saorstát Éireann) was 14.9 and for all **rural districts** 13.2, as compared with 13.7 and 12.7, respectively, in 1934.

For the **twelve Principal Towns** in the aggregate the rate was 15.2, as compared with 13.9 in 1934.

The individual towns with their rates per 1,000 of population, arranged in order from the lowest to the highest, are as follows: Sligo, 12.8; Dún Laoghaire, 14.1; Dundalk, 14.6; Cork and Galway, each 14.8; Dublin, Drogheda and Tralee, each 15.2; Kilkenny, 16.1; Limerick, 16.3; and Waterford and Wexford, each, 16.7.

For the remaining urban districts (those with less than 10,000 population) the general death-rate in 1935 was 14.0, as against 13.1 in 1934.

### Causes of Death.

In Table II, page 88, the number of deaths from some of the principal causes is shown for the years 1930-35, with the rates represented thereby.

**Principal Epidemic Diseases.**—Deaths from these causes in 1935 are equivalent to 0.53 per 1,000 of the population, as compared with an average of 0.51 for the five years 1930-34.

When compared with the average for the five years previous, deaths from typhoid fever, typhus and whooping-cough for the year 1935 show decreases of 14, 3 and 145, respectively; on the other hand, deaths from measles, scarlet fever, diphtheria and diarrhoea and enteritis of children under 2 years, have increased by 108, 16, 5 and 114.

Of the deaths from diphtheria, 374 in number, 172 were recorded for urban areas, including 89 for Dublin city, 12 for Drogheda urban district, and 6 for Limerick county borough.

Table 2 shows that the mortality from the principal epidemic diseases in the counties and county boroughs varied from 0.1 for Leitrim, and 0.2 for the counties of Longford, Mayo, Roscommon, Sligo and Monaghan, to 1.7 for Waterford county borough, and 2.1 for Limerick county borough.

The death-rate from these diseases for the twelve principal towns in the aggregate was 1.0 per 1,000, the rates fluctuating from 0.3 for Dún Laoghaire Boro' to 2.1 for Limerick county borough. The 644 deaths from all causes for the latter area included 4 from typhoid fever, 27 from measles, 2 from whooping-cough, 6 from diphtheria, and 45 from diarrhoea and enteritis of children under 2 years. (Table 3.)

**Influenza.**—The number of deaths registered from influenza was 928, as against an average of 1,244 during 1930-34, the respective annual rates being 0.31 and 0.42 per 1,000 of the population. The rate per 1,000 for the aggregate of cities or boroughs and urban districts was 0.2 and for rural districts 0.3.

Of the 928 deaths, 326 were registered in the first quarter, 341 in the second, 119 in the third, and 142 in the fourth.

The rates for counties and cities varied from 0.9 for Longford and 0.8 for Donegal, to 0.1 for each of Cork county borough and Limerick county borough and 0.2 for each of the city of Dublin and the counties of Kildare, Louth, Cork, Kerry, Limerick, Tipperary S.R., and Sligo.

**Tuberculosis.**—Deaths from all forms of this disease numbered 3,697, being equal to 1.2 per 1,000 of the population, as compared with an annual average of 3,685 and a rate of 1.2 for the five years 1930-34. Table 2 shows that the rates in 1935 varied from 1.8 for the City of Dublin and Cork county borough to 0.7 for Leitrim county and 0.8 for the counties of Roscommon, Cavan and Monaghan.

For the aggregate of cities or boroughs and urban districts, the death-rate from tuberculosis was 1.7 per 1,000 of the population of these areas, as against 1.0 for all rural districts. The rate for the twelve principal towns was 1.7 per 1,000.

**Puerperal Conditions.**—The number of deaths attributed to accidents and diseases of pregnancy and childbirth was 238, affording a rate of 4.1 per 1,000 births registered, which is 0.4 below the average rate for the preceding five years. (Table II, page 88.)

Of the 238 deaths, 73 were ascribed to puerperal sepsis, or 1.3 per 1,000 births, and 165 to other puerperal conditions, or 2.8 per 1,000.

From Table 2, which shows the mortality for counties and county boroughs and for urban and rural areas in the aggregate, it will be seen that the rates varied from 10.4 for Leitrim county and 7.7 for Tipperary S.R. county, to 1.6 for Cork county borough and 1.7 for the counties of Kildare and Kilkenny.

The aggregate rate per 1,000 births for cities or boroughs and urban districts was 3.1; for rural districts, 4.7; for the twelve principal towns, 2.8; and for the urban districts under 10,000 population, 4.2 per 1,000 births.

### Ages at Death.

Of 41,489 deaths at all ages, 3,924 or 9·5 per cent., were those of infants under one year of age, and 18,896, or 45·5 per cent., were those of persons 65 years and upwards.

### Infant Mortality.

The **Infant Mortality** rate in 1935 was 67 per 1,000 births registered, as against 63 in 1934, and an average of 67 for the five years 1930-34. (Table I, page 87.)

Table 2, page 111, shows that for cities or boroughs and urban districts in the aggregate, the rate for infant mortality was 88 per 1,000 births and for rural districts 55.

### Deaths in Public Institutions.

Deaths in institutions numbered 12,934, or 31·2 per cent. of all deaths registered, as compared with 29·8 per cent. in 1934.

### Inquests.

There were 1,247 inquests or deaths registered on Coroners' certificates during the year, or 3·0 per cent. of the total deaths registered; the percentage in 1934 was 3·1.

### Uncertified Deaths.

The number of deaths in which the cause was not stated to have been certified by a medical practitioner was 7,979, or 17·5 per cent. of the total deaths, as against a percentage of 18·3 in 1934.

### Vaccination.

As returned by the Registrars, the number of successful **primary** vaccinations during the year was 33,597, or 57·7 per cent. of the total births registered, the percentage for the year 1934 being 59·5.

---

## CITY OF DUBLIN.

---

### BIRTHS.

The number of births registered during 1935, exclusive of 1,813 occurring in institutions relating to other localities, was 11,451; the rate per 1,000 of the estimated population represented thereby was 26·7, as compared with 26·3 in 1934. The total births registered numbered 13,264, of which 6,895 were boys and 6,369 girls.

### DEATHS.

Omitting 985 deaths registered in the city relating to other localities, and including those of persons usually resident in Dublin who died elsewhere in Saorstát Éireann, the deaths ascribed to the city numbered 6,506, equivalent to a rate of 15·2 per 1,000 of the estimated population, as against 13·6 for the year 1934. The total number of deaths registered in the city was 7,301 (3,713 males and 3,588 females).

In Table 4 the number of deaths by age-periods recorded for each of the districts comprising the city is shown, together with information regarding deaths from some of the principal causes and also the infant mortality rate. *The figures for these areas are partially corrected for births and deaths in institutions, and relate to the year (52 weeks) ended the 28th December, 1935.*

## Causes of Death.

In the following statement is given the number of deaths from all causes by age-periods and from some of the principal causes recorded for the City of Dublin during the years 1934 and 1935, the latter by quarters, with the mortality per 1,000 of the estimated population for each of these years; also infant mortality, mean temperature, rainfall and sunshine.

\*Per 1,000 Births.

**CITY OF DUBLIN.—contd.**

**Principal Epidemic Diseases.**—It will be seen from the foregoing statement that the deaths from this group of causes numbered 419, affording a rate of 0·97 per 1,000 of the population as compared with 0·74 for the preceding year. When compared with the figures for 1934, decreases are shown in the mortality from typhoid fever and whooping-cough amounting to 9 and 71, respectively. In the case of measles the number of deaths increased from 11 to 87, scarlet fever from 4 to 18, diphtheria from 75 to 89 and diarrhoea and enteritis of children under 2 years of age from 124 to 205.

**Influenza.**—Deaths from this cause for the city numbered 83, equivalent to 0·19 per 1,000 of the population, as compared with a total of 32 and a rate of 0·08 for the year 1934.

**Tuberculosis.**—The number of deaths from all forms of this disease was 767, representing 1·79 per 1,000 of the population, as compared with 1·68 for the preceding year.

Of the total, 603 were ascribed to pulmonary tuberculosis, or 1·41 per 1,000 of the population, and 164 to other forms of the disease, or 0·38 per 1,000. In 1934, the corresponding rates were 1·34 and 0·34.

**Ages at Death.**

Of the 6,506 deaths at all ages 1,503 (or 23·1 per cent.) were those of children under 5 years of age, and 1,971 (or 30·3 per cent.) of persons 65 years of age or upwards, the corresponding percentages for 1934 being 20·4 and 30·2.

**Infant Mortality.**

There were 1067 deaths of infants under one year of age recorded, representing a rate of 93 per 1,000 births, as compared with 79 in 1934. In Table 4 the rates for the respective districts of the city are shown.

**Deaths in Public Institutions.**

The deaths of Dublin residents which occurred in public institutions numbered 3,391, or 52·1 per cent. of the total deaths.

**Cases of Infectious Diseases.**

The number of cases of infectious diseases notified in the city during the year was 2,201, as shown in Table 5, while Table 6 gives the number of cases of certain diseases under treatment in Dublin hospitals during the same period.

TABLE 1.—MARRIAGES, BIRTHS AND DEATHS Registered during the Year ended 31st December, 1935, IN SAORSTÁT ÉIREANN, shown by PROVINCES AND COUNTIES, with Deaths from some of the Principal Causes, Inquest Cases, Deaths in Public Institutions; Uncertified Deaths; and the number of VACCINATIONS; also similar particulars regarding NORTHERN IRELAND.

\* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Saorstát Éireann and the City of Dublin are calculated on the estimated population in the middle of 1935; those for the other areas on the population according to the Census of 1926.

‡ The rates for the administrative counties of Dublin, Cork, Limerick and Waterford are based on the births registered therein plus a proportion (derived from the record of transfers during 1930-1932) of the births registered in the respective county boroughs relating to other localities.

[illegible]

\* For populations and density per acre, see Table IV, page 90.

† Including all deaths registered on Coroners' certificates.  
The rates for Saorstát Éireann, the City of Dublin and the Borough of Dún Laoghaire are calculated on the estimated populations in the middle of 1935.

i The rates for Saorstát Éireann, the City of Dublin and the

† The rates for Saorstát Éireann, the City of Dublin and the Borough of Dún Laoghaire are calculated on the estimated populations in the middle of 1933.

TABLE 4.—Showing for the Year 1934 (52 weeks) ended, 28th December, 1935, the mortality from All Causes and from some of the Principal Causes of Residents of the several REGISTRARS' DISTRICTS comprising the CRIMES OF DUBLIN AND CORK,\* also the Deaths at certain age periods, and the number of Uncertified Deaths.

NOTE.—See note at heading of Table V, page 92.
